PixelFree: Turning Posters into Videos with Programs

A. Author, B. Author · Example University · Probe input for code-to-video

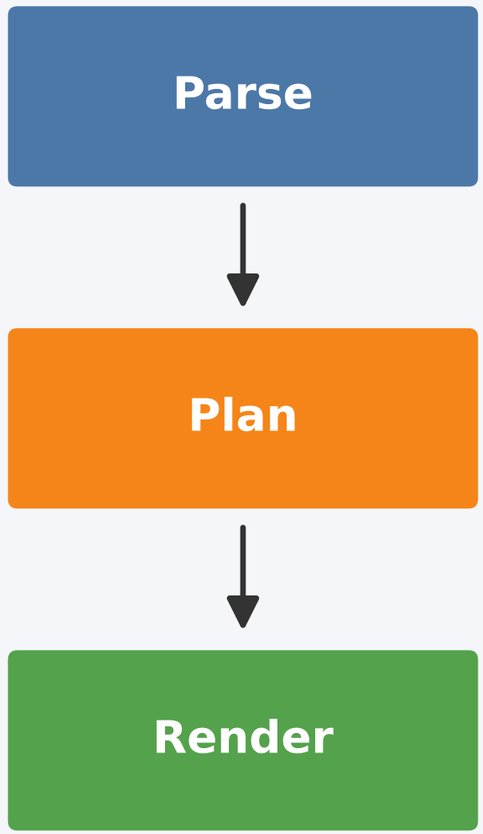
1. Motivation

Video models give pixels; programs give editable, diffable, reproducible frames. We parse the poster layout, then animate each panel in reading order.

Key idea

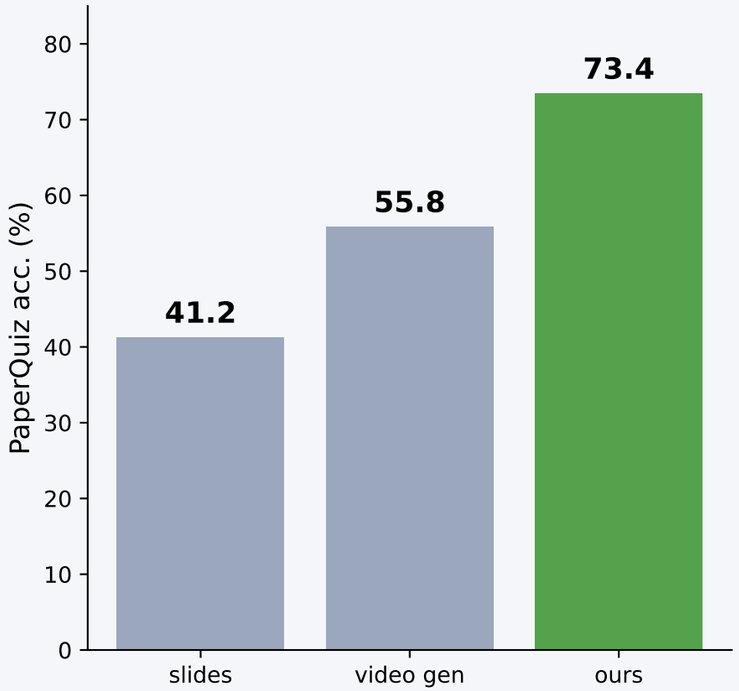
```
frame(t) = f(t), no model
```

2. Method



layout → storyboard → frames

3. Results



Ours +17.6 over the best baseline

(synthetic numbers for the probe)
